

JORDAN COUSINEAU

cousineau.jordan24@gmail.com | (503) 856-4523 | www.linkedin.com/in/jordancousineau

EDUCATION

Boston University Boston, MA
Master of Science, Robotics and Autonomous Systems Jan 2026

Coursework: Motion Planning, Image Processing, Embedded Systems, Advanced Dynamics, Soft Robotics.

Pacific University Forest Grove, OR
Bachelor of Science, Mathematics | Minor: Computer Science Aug 2024

Coursework: Linear Algebra, Multivariable Calculus, Probability & Statistics, Data Structures, Databases.

EXPERIENCE

Fleet Operations Technician Jun 2026 - Present
Boston Dynamics Waltham, MA

- Perform first-level technical triage on hardware and software issues.
- Identify gaps in troubleshooting processes and contribute to new SOPs, operational playbooks, and debugging tools.
- Own 2nd shift fleet operations, ensuring maximum robot uptime and efficient execution of testing.

Weekend Manager & Robotics Instructor Oct 2024 - Jun 2026
The Robo Hub Cambridge, MA

- Directed all weekend operations in a fast-growing robotics education center: coordinating staff, supplies, and timelines for multiple simultaneous events each weekend.
- Managed end-to-end logistics: maintain inventory, order event supplies, and track usage for cost control.
- Built scalable processes from the ground up by creating and standardizing SOPs for classes, curriculum, and weekend operations.

Robotics Research & Development Intern Jun 2025 - Aug 2025
Boston University Boston, MA

- Developed a PyQt5 GUI to automate the workflow of ROS2, including command execution, SSH connection, and node startup.
- Designed a system to partition a motion-capture-tracked floor, enabling safe operation of multiple robots in shared lab space.
- Integrated control barrier functions with motion capture localization to enforce partition boundaries.

PROJECTS

Autonomous Vehicle Retrofit Startup Jan 2026 - May 2026

- Designing autonomy stack architecture across NVIDIA Jetson platforms and cameras.
- Authoring ROS-based modules for sensor integration and vehicle control.
- Collaborating with other teams to create modular, effective, and non-invasive hardware.

Solar UAV/VTOL Path Planning and Optimal Control Research Sep 2025 - Dec 2025

- Researched and developed a global path planning approach for long-distance solar UAV flight, optimizing scheduling of flight modes with constraints to dynamics and hardware.
- Simulated long-distance solar-powered flight under varying environmental conditions using historical weather data to evaluate mode optimization performance.

SKILLS

Programming Languages: Python, C++, C, Bash, SQL, PHP, CSS, JavaScript.

Tools: Git, MATLAB, RStudio, Linux, ROS2, SQL, NumPy, Matplotlib.
